Pelican Network

IB Portal

Turn signal distribution into a measurable commercial channel — with visibility over copiers, referrals and performance-fee participation.

Why it Matters

IBs and signal providers can track their copier base, copier-level activity, assets under management, P&L, performance fees and referral earnings in one place.

Dedicated links allow IBs to market individual strategies, identify where copiers originate and build recurring commercial relationships.

Crucially, an IB can earn an agreed share of a signal's performance fee without executing the underlying trades or acting as the signal provider.

How to Get Started

01. Open the IB Portal and sign in using existing broker credentials — no separate portal account needed.

02. Connect your trading account as a signal to this profile if you haven't already.

03. Review the dashboard to monitor connected copiers, fee activity and referral performance.

04. Create a Private Signal View (PSV) for a particular signal, assign it to a specific IB or affiliate and add affiliate/referral links

05. Configure the intended performance-fee allocation with Pelican and distribute the dedicated link.

06. Create additional PSVs for further IBs, affiliates, campaigns or client groups; use portal reporting to see which links generate engagement and copiers.

Commercial Use Case

IBs do not need to trade themselves: they can choose from 9,000+ signals across the **Pelican Network**, create dedicated PSVs and earn an agreed share of performance fees — in addition to any existing rebate arrangement. They can promote specific strategies to their audiences and track the resulting copiers through the IB Portal.
